

Your Plus for Quality – Our Certifications for Wood Pellets.

Wood as an environmentally-friendly fuel from renewable biomass is attracting a growing interest worldwide. Wood pellets in particular are a good alternative to heating oil and natural gas. Our DIN marks for wood pellets provide you with a clear guide for making a decision and facilitate the search for a professional supplier and specialist.

TÜVRheinland®

DIN CERTCO

THE MARK MAKES THE DIFFERENCE.

In 2002, we launched the [certification for wood pellets](#) and have since established ourselves as one of the leading certification bodies in the field. By using our service, companies worldwide document that they work at the highest quality level, offer a consistently high product quality and voluntarily undergo regular monitoring. This creates trust.

TESTING AND SCOPE OF TESTING.

Product testing is carried out as part of an initial testing in accordance with the requirements of the international standard [DIN EN ISO 17225-2](#) by a testing laboratory that is recognized by us. The properties tested include water content, bulk density, abrasion behavior and ash melting temperature.

ASSESSMENT AND CERTIFICATION.

Upon successful assessment by our experts, a certificate is issued together with the right to use the DINplus mark with an individual registration number and a validity period of five years.

MONITORING.

The periodic monitoring of the manufacturing facility is an important element of the DINplus certification. As a third-party monitoring body, we carry out an inspection of the manufacturing plant at least once a year to verify proper self-monitoring. As part of this factory inspection, our experts also take a product sample for random testing. Save costs and time by combining inspections, e.g. when you commission DIN CERTCO to conduct a PEFC certification for wood pellets at the same time.

OPENNESS AND TRANSPARENCY.

A list of all certificate holders that is updated daily can be found on our [homepage](#). All certification-relevant documents, such as the certification program and the application form can also be accessed there.

OUR FURTHER BIOMASS CERTIFICATIONS.

To provide further proof of the high quality of your products, we offer you additional certification options in addition to the internationally recognized DINplus certification for wood pellets, e.g. the certification of wood briquettes or barbecue briquettes.

DINPLUS – QUALITY ASSURANCE IN TRANSPORT AND STORAGE LOGISTIC FOR WOOD PELLETS.

With our mark [DINplus – Quality Assurance in Transport and Storage Logistic](#), manufacturers and distributors as well as transport companies demonstrate that they ensure a high pellet quality throughout the entire logistics chain. To obtain this certification, specific requirements for intermediate storage and transport vehicles must be met and the personnel must have the appropriate qualifications.

DIN-GEPRÜFT – PELLET STORAGE.

In addition to production and transport, optimal quality must also be ensured during storage. This is demonstrated with the mark [DIN-Geprüft für Pelletlagerung](#). During an annual factory inspection, a product test is carried out, which in addition to the purely static product requirements includes important details such as the management of fine particles or the abrasion properties.

BENEFITS OF A DIN CERTIFICATION.

- Strengthening the trust and confidence of markets and consumers in the internationally renowned DIN mark for wood pellets.
- Confirmation of your high quality by us as an independent and accredited certification body.
- Clear guide and decision-making aid for your customers.
- Clear differentiation in the competitive field and development of new national and international markets.

We will be happy to give you more information about our comprehensive certification options for wood pellets. Talk to our experts today!
