

# Checklist for DINplus wood pellet certification adipiscing elit.

The labeling, insert and accompanying documents for wood pellets for small furnaces as per DIN EN ISO 17225-2 (A1) must contain a variety of information that you should include for successful certification. The following information must be provided for deliveries in the language of the sales market and clearly legible form:

## Required Information

Name or contact possibilites, registered trademark of the manufacturer or seller/vendor	
Specification of the product along with its diameter (in mm), e.g. wood pellets – 6 mm diameter	
Nominal weight or mass of the packaging contents	
Ash melting temperature (optional)	
Note that pressed pellets may only be stored in suitable, well-ventilated storage facilities if loose pellets are delivered to the end user.	
Incineration is permitted only in suitable furnaces approved for that purpose (see operating manual for the furnace)	
Indication of the year of manufacture and the production site (in case of multiple monitored production sites) by means of an identification code or serial number	
Quality mark „DINplus“* and registration number (min. 2 mm height) from DIN CERTCO after successful certification	

\* The character may be kept only in its original form with the corresponding registration number (minimum height 2 mm). Only the size of the mark may be modified, and only proportionally. Diverging from the color scheme specified by DIN CERTCO, the mark may be shown in monochrome.
