

Your way to certified biomass pellets

The simple certification process of DIN CERTCO

The energy transition requires divergent solutions. Non-wood pellets made from biomass represent a new, interesting alternative to wood in this respect. They consist of renewable raw materials such as straw, bamboo, coffee residues, rice seeds, grass clippings, hemp, nutshells and other biomass.

However, manufacturers of such bioenergy fuels face some challenges. Boiler manufacturers rarely mention non-wood pellets as a possible fuel because of the lack of evidence of consistently good quality characteristics in this segment. The same is true for end users, who do not know exactly what properties to expect from non-wood pellets and are therefore reluctant to buy.

With our certification "DINplus non-wood pellets", you demonstrate consistently high quality for your pellets made from wood alternatives and secure a unique selling point in a dynamic, competitive future market.

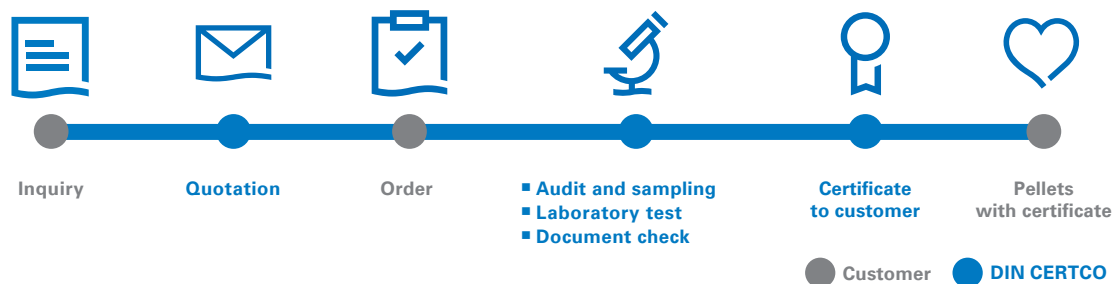

Our experts make the certification process particularly simple. We take care of the entire process, coordinate appointments and award you the desired certificate after successful audits.

OUR MAIN AND SUB-CERTIFICATES:

- The [main certificate](#) is for manufacturers or distributors with bagging equipment and loading stations. The certification includes an audit with sampling and a laboratory and documentary check.
- The [sub-certificate](#) is for distributors without physical contact with biomass pellets. The certification includes only a document audit.

ARE YOU A MANUFACTURER/RETAILER WITH BAGGING SYSTEMS AND LOADING STATIONS?

Your way to certified biomass pellets according to DIN EN ISO 17225-6

Take the chance now to prove the high quality of your non-wood pellets with a recognized test mark and convince your customers with the good name of DIN CERTCO.

DIN CERTCO is a certification company of TÜV Rheinland Group and the certification body for issuing DIN marks and other certification marks. Due to our independence, neutrality, competence, and many years of experience, we enjoy a high reputation at home and abroad.

TAKE THE NEXT STEP

You want to learn more about our certification for non-wood pellets? Check out our [website](#) for more details. Or take the next step right now and request your no-binding quote today! We will accompany you on your way to more sustainability.
